

Westpro Machinery Demonstrates Industry-Leading Speed and Quality with Delivery of Custom Drum Scrubber for Diamond Mine in Northern Canada

Vernon, BC – July 15, 2025 – Westpro Machinery is proud to announce the successful delivery of a custom-engineered drum scrubber with integrated trommel system for a leading diamond mining operation in northern Canada.

Engineered for maximum durability and operational efficiency, the drum scrubber was purpose-built to process diamond-bearing ore with precision and longevity. Westpro's solution delivers effective scrubbing, optimized particle size control, and robust wear resistance.

Key features include heavy-duty rubber drum linings, a specialized discharge trommel screen, and a removable feed chute with integrated water inlet, each tailored to ensure superior performance in abrasive conditions.

Remarkably, the system was designed, manufactured and delivered in under four months from the order date, demonstrating Westpro's commitment to providing premium mineral processing solutions on aggressive timelines without compromising quality.

"This installation showcases our ability to provide highly engineered systems that address the unique challenges of the diamond sector," said Carleton Banks, Engineering Manager at Westpro Machinery.

"Even under tight deadlines, our team remains focused on delivering long-term value through innovation, reliability, and technical excellence."
